

Estimation

A **hand span** is the distance from your pointing finger to your thumb. Stretch the fingers apart. To **estimate** is when you look at an object and try to tell its length.

Complete the table below:

- Use hand span to measure the length of the objects.

Object	Estimate	Measure (Hand span)
A desk		
A book		
The window sill		
The window		

1 Which object is the longest?

2 Which object is the shortest?

Now take pieces of string and measure everyday objects (pencil, scissors, eraser, crayon). Cut the string the same length as the object. Paste the strings from the longest to shortest below:

a	
b	
c	

Measurement

Estimates, measures, compares, orders and records length using non-standard measures.
